

I am very happy to learn that the Institute of Applied Medicine and Research , Ghaziabad is organizing a International conference on Life Science and Bioengineering on 22-23 November 2014.

Biotechnology as the major technology of the 21<sup>st</sup> century with its wide-ranging and multidisciplinary activities , holds a deep impact on the vast number of the fields , touching almost everyone , to the benefit of mankind .

Especially. Its usage and importance for developing country like ours with a large population stand out because population growth brings forth new and enormous challenges in the vital areas of food, water energy and environmental needs , which can be tackled through a proper understanding and exploitation of the utilities of the biotechnology. The importance of life science in the paramedical field can not also be belittled. Research and development in the areas of medicines and vaccines will help us a lot , when met with success , in terms of national savings.

I am sure the International conference conference being organized by the institute of Applied Medicines and Research , Ghaziabad to deliberate on such a vital topic having a bearing on the welfare of the mankind will be quite useful for the participant and I take pleasure in Conveying my good wishes for the success of the conference.
